New name, same site.
oostburgbank.com ➡ oostburgstate.bank

🔍 OostburgState.Bank 🎤

The main takeaway: For security purposes our website URL now ends in '.BANK' instead of '.com'

What is .BANK?
.BANK is a gated domain, like .gov or .edu, but for verified banks. Replacing .com, which can be purchased by anyone, .BANK quickly verifies that the website is authentically from our bank, so you can interact with confidence when you see the '.BANK' at the end of our website URL.

How is .BANK more secure?
All banks are verified and authenticated by fTLD , the .BANK administrator, prior to registering their .BANK domain, and re-verified annually thereafter. This ensures everyone using a .BANK domain is an eligible organization . Hackers and bad actors can't get a .BANK domain to create lookalike domains for phishing and spoofing, as they can in '.com' and other publicly available domains.

With the '.BANK' visual authentication cue in place you can quickly confirm if websites of ours are real, and avoid interactions that could lead to identity theft and financial fraud.

All banks within the .BANK domain must also implement additional Security Requirements to help secure their sites, and protect them, their vendors and their customers from phishing, spoofing and other cyberattacks. All banks using .BANK are monitored for compliance with these security requirements on an ongoing basis.

Do I need to do anything differently now that you're in .BANK?
Our .com email addresses still work, and our .com website redirects to our new .BANK site, but over time you should update your bookmark for our site.

You're the first '.BANK' I've seen, why haven't all the other banks moved?
The move to .BANK is a business decision every bank must make, and plan for, based on its priorities and resources. We decided it was a priority for us to enhance our security and provide our customers with an easy way to authenticate our website.
